PROFESSIONAL SUMMARY

Data Analyst with a software engineering background and hands-on experience building end-to-end analytics solutions, from data integration and dimensional modeling to automated pipelines and Power BI dashboards. Skilled in SQL, Python, data warehousing, and data visualization, with project experience across marketing, retail, SaaS, and industrial GIS data.

SKILLS

Programming & Query Languages: Python, SQL, JavaScript.

Data Analysis & Statistics: Data Cleaning & Preprocessing, Exploratory Data Analysis (EDA), Statistical Analysis.

Databases & Data Engineering: MySQL, PostgreSQL, MongoDB, SQL Server, Data Modeling, ETL/ELT, Data Pipelines, Data Warehousing, dbt, Apache Airflow, REST APIs.

Data Visualization & Reporting: Power BI, Excel, Dashboard Development, Data Storytelling, KPI Tracking, Reporting.

Analytics Tools & Automation: Workflow Automation (n8n), Data Integration.

Development & Deployment: Node.js, React, Next.js, Docker, Linux, Git, CI/CD, Kafka, Cloud (Azure).

Languages: Arabic (Native), English (Professional), French (Intermediate).

WORK EXPERIENCE

Sonatrach, Hassi Messaoud Feb 2024 - Jul 2024

Software Engineering Intern

- Developed **Pipexe**, a custom GIS software for real-time pipeline monitoring and management.
- Structured pipeline, infrastructure, and inspection data into operational interfaces supporting the monitoring of more than 500 km of pipeline assets in the Hassi Messaoud region.
- Collaborated with Sonatrach engineers to translate operational requirements into analytical features, improving inspection tracking and supporting safety compliance.

Algérie Télécom, Batna Sep 2022

Network Engineer Intern

- Troubleshoot and resolved 3 network issues alongside senior engineers, improving system reliability and deepening hands-on understanding of telecommunication systems.

AWARDS AND HACKATHONS

DevFest Hackathon, Batna 24-26 Dec 2021

Full Stack Web Developer - Second Place

- Placed second in the DevFest Batna Hackathon by co-developing **Gaza Lens**, a web application designed to support news verification and combat misinformation.
- Built interactive dashboards and visualizations to present complex information clearly to non-technical users.

EDUCATION

Higher School of Computer Science (ESI-SBA), Sidi Bel Abbes, Algeria 2019 - 2024

Master's & Engineering degree in Computer Science.

Specialization: Information Systems and Web Engineering.

PROJECTS

- Meta Ad Performance Analysis:** Built a star-schema Power BI dashboard analyzing 339.8K impressions across Facebook and Instagram using 12 custom DAX measures. Identified that Facebook generated nearly twice as many purchases despite Instagram's slightly higher CTR, supporting a proposed 60/40 Facebook–Instagram budget allocation.
- Bike Store Sales Intelligence:** Built a Bronze/Silver/Gold analytics pipeline integrating PostgreSQL source data into a SQL Server reporting warehouse. Analyzed 60,407 transactions representing \$29.4M in dataset revenue across six countries and identified that Bikes generated 96.5% of revenue at a 38.8% margin, compared with 61.9% for Accessories, supporting product-bundling and pricing recommendations.
- QuickEats Food Delivery Analytics:** Built a production-style analytics pipeline processing 100K simulated orders through Kafka, Amazon S3, dbt, and Apache Airflow. Developed Power BI dashboards covering revenue, operations, churn, and SaaS metrics, identifying a modeled MRR decline linked to restaurant churn and estimating a potential \$676K annual recovery opportunity based on documented assumptions.
- Pipexe:** Engineered a real-time GIS data infrastructure platform for monitoring and managing oil pipeline assets, converting unstructured sensor/inspection data into stakeholder dashboards for maintenance planning, anomaly alerts, and compliance reporting.
