ABOUT ME

Full Stack Data Analyst with a software engineering background, delivering end-to-end data solutions — from connecting and integrating multiple data sources, building pipelines, and cleaning modeling data, to reporting through dashboards and automated insights. Skilled in SQL, data visualization, cloud environments and AI-powered automation workflows.

SKILLS

Programming & Query Languages: Python, SQL, JavaScript, R (Basic).

Data Analysis & Statistics: Data Cleaning & Preprocessing, Exploratory Data Analysis (EDA), Statistical Analysis, Machine Learning (Basic), A/B Testing (Basic).

Databases & Data Engineering: MySQL, PostgreSQL, MongoDB, SQL Server, Data Modeling, ETL Processes, Data Pipelines, Data Warehousing, dbt, Apache Airflow, REST APIs.

Data Visualization & Reporting: Power BI, Excel, Dashboard Development, Data Storytelling, KPI Tracking, Reporting.

Analytics Tools & Automation: Workflow Automation (n8n), RAG Systems, Recommendation Systems, Data Integration.

Development & Deployment: Node.js, React, Next.js, Docker, Kubernetes, Linux Git, CI/CD, Cloud (Azure).

Languages: Arabic (Native), English (Professional), French (Intermediate).

WORK EXPERIENCE

Agencies.studio Sep 2024 - now
remote web developer

- Architected responsive brand websites and landing pages with custom animations, CMS-driven content structures, and multilingual data models, partnering with clients and designers to turn brand requirements into structured, reusable components.
- Audited and optimized site performance, accessibility, and responsiveness across devices, reducing load times and improving usability metrics.

Sonatrach internship, Hassi Messaoud Feb 2024 - Jul 2024
Software Engineer

- Developed **Pipexe**, a custom GIS software for real-time pipeline monitoring and management.
- Streamlined monitoring of 500+ km of pipelines and multiple infrastructures in the Hassi Messaoud region through Pipexe's deployment.
- Collaborated with Sonatrach engineers to translate operational requirements into analytical features, improving inspection tracking and supporting safety compliance.

Algerie telecom, Batna Sep 2022
Network Engineer Intern

- Troubleshooted and resolved 3 network issues alongside senior engineers, improving system reliability and deepening hands-on understanding of telecommunication systems.

EDUCATION

Higher School of Computer Science (ESI-SBA), Sidi Bel Abbes, Algeria 2019 - 2024

Master's & Engineering degree in Computer Science.

Speciality: Information systems and web.

PROJECT WORK

- **Meta Ad Performance Analysis:** Built a star-schema Power BI dashboard tracking the full funnel from impression to purchase across Facebook and Instagram (339.8K impressions analyzed, 12 custom DAX KPIs). Identified that Facebook converts 2x more purchases despite Instagram's higher CTR, informing a 60/40 budget reallocation recommendation.
- **Bike Store Sales Intelligence:** Engineered a full Bronze/Silver/Gold Medallion Architecture pipeline (PostgreSQL → SQL Server) analyzing \$29.4M in revenue across 60,407 transactions and 6 countries. Surfaced a margin paradox — Bikes drove 96.5% of revenue at only 38.8% margin vs. 61.9% for Accessories — translating into concrete pricing recommendations.
- **QuickEats Food Delivery Analytics:** Designed an end-to-end streaming pipeline (Kafka → S3 → dbt → Airflow) processing 100K orders and \$15.02M in tracked revenue, then built dual Power BI dashboards (Revenue/Ops and SaaS metrics). Diagnosed a 95%+ MRR collapse driven by cross-tier restaurant churn, quantifying a \$676K/year recovery opportunity.
- **Pipexe:** Engineered a real-time GIS data infrastructure platform for monitoring and managing oil pipeline assets, converting unstructured sensor/inspection data into stakeholder dashboards for maintenance planning, anomaly alerts, and compliance reporting.
